

Exercise 1

Task 5: Questions

1. Advantages and disadvantages of using databases compared to spreadsheets

Advantages:

- Databases ensure high data integrity because they follow specific rules. For example, domain rules guarantee that only numeric values can be entered for a date, which reduces errors.
- SQL allows complex filtering, queries and calculations Ganchev (2022).

Disadvantages:

- Using Databases requires SQL knowledge, which makes spreadsheets more user-friendly.
- With databases, we have to define relationships between the tables, so setup takes longer Ganchev (2022).

2. Documentation link and category of version ()

The Documentation link is this one:

<https://www.postgresql.org/docs/current/functions-info.html>

and version () function belongs to the Version Information Functions
