

Task 5: Questions

1. Advantages and disadvantages of using databases compared to spreadsheets

Advantages:

- Databases ensure data integrity and consistency through constraints and transactions.
- Databases are scalable and multi-user friendly, allowing many users to work with large datasets at the same time.

Disadvantages:

- Databases are more complex to set up and use than simple spreadsheets.
- They require infrastructure and administration, which can be costly compared to using a lightweight spreadsheet.

2. Documentation link and category of `version()`

The function `version()` returns a string with information about the PostgreSQL server version and the operating system.

It belongs to the category **System Information Functions**.

Official documentation: [PostgreSQL – System Information Functions](#)

Example:

```
SELECT version();
```
